Manufacturing of Maltese Blinds, Canopies and lately Windbreakers by the most resistant plant Arundo Donax ( Qasab *Ref: Photo H0004*), began in 1984.

In 2016, launched the service of harvesting and shredding as per ERA instructions for this species: (Arundo Donax).

The cane reed (Arundo Donax) will be machined or handy harvested, bundled, and transported to our manufacturing premises, then pass through a separation process.

The **Good Harvest** (*Mature Harvest Ref: Photo H0002*) will be stocked for manufacturing and reused for blind, canopies and windbreakers manufacturing (*Ref: Photo H0004*).

The **Bad Harvest** (*Immature Harvest Ref: Photo H0001*) will be shredded in designated machines that will be turned into organic compost and given to farmers for soil fertilizers.

Tal-Hsajjar Decorator also able to remove all the rhizomes (Basla *Ref: Photo H0003*), where necessary, after studying the area involved. Sometimes removing Arundo Donax, rhizomes completely will affect the soil and habitats/organism living around. By more logical monitoring and maintenance from June to September and harvesting in the proper season from January to March, the area can avoid soil erosion and natural habitant/organism extinction.

## **We make sure:**

### 1. Taking care of the environment:

- a. we walk hand in hand with Environmental Organizations, Planning Authority(P.A) and Environmental Planning Authorities (E.R.A)

### 2. Also make sure that 90-95% of the harvested material will be reused as follows:

- a. Immature Cane will be shredded and reuse for various market demand and requests.
- b. Mature leftover cuttings during manufacturing process will be converted into Mulch to reduce water hydration from soil.
- c. In the coming years, converting immature cane and leftovers as biofuels that would be 100% safe to be domestically used.

Mulch Mixture: 10% Wood & 90% Shredded Cane (left Overs from manufacturing). This is photo taken during testing & sampling

## **Benefits: Cane Reeds Blinds , Canopies & Windbreakers:**

- **Provide extremely efficient and flexible sun light control**
- **Protect Privacy.**
- **Increase area shading up to 96% - 98%.**
  
- **It can ensure smooth flow of inside air, helping the house to stay cool with savings of up to 25% - 35% in energy cost.**
- **Protection from flies and insects.**
- **Protect people from UV harm.**
- **Blocks dust.**
  
- **Protect farmer's crops from blizzard winds and high droughts.**
- **High quality manufacturing.**
- **Long life serving.**
- **Convenient to Operate, Cleanup and Maintain**
